# Vehicle Rental Management System

(C++ Case Study Project)

# Index

1. Problem Statement
2. Your solution
3. Working (Method/Mind map)
4. Conclusion.

Note: Slides (excluding Thank-you and Introduction slide) should not be more than 4.

# PROBLEM STATEMENT

Many vehicle rental businesses still rely on **manual booking systems** such as phone calls or paper records.

This creates several problems:

🚗 Customers cannot easily check vehicle availability

💰 Billing calculations are done manually

📋 Rental records are difficult to maintain

⏱️ Manual booking processes are time-consuming

Customers cannot easily check vehicle availability

Billing calculations are done manually

Rental records are difficult to maintain

Manual booking processes are time-consuming

Because of these issues, rental businesses face inefficiency and delays.

# OUR SOLUTION

To solve these problems, we developed a **Vehicle Rental Management System** using **C++**.

The system allows users to:

- View available vehicles
- Book vehicles for specific days
- Automatic billing calculation
- Maintain rental history
- Return rented vehicles and update availability

This system simplifies vehicle rental management and improves efficiency.

# WORKING (METHOD / MIND MAP)

1. User starts the program
2. System displays available vehicles
3. User selects vehicle ID
4. User enters number of rental days
5. System calculates bill automatically
6. Rental is stored in rental history
7. Vehicle can be returned later and becomes available again
6. Rental is stored in rental history

# System Screenshots & Example Outputs

## Required Screenshots

- VS Code project code
- Terminal output

```
Example outputs:

1. Show Vehicles
2. Rent Vehicle
3. Return Vehicle
4. Rental History

Enter Vehicle ID: 1
Enter Days: 3
Total Bill: 6000
```

# SLIDE 7 — CONCLUSION

The **Vehicle Rental Management System** demonstrates a simple digital solution for managing vehicle rentals.

Key advantages:

- Easy vehicle booking
- Automatic billing system
- Rental history tracking
- Improved efficiency for rental businesses

Future improvements can include:

- GUI application
- Database integration
- Online booking system

Future **improvements** can include:

- GUI application
- Database integration
- Online booking system
